                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       628
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              568
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     597
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   508
```

This sequence represents a fragment of the genomic sequence containing the coding region for the mouse WRN gene (AAX83004). The corresponding human gene (AAX83001) encodes a protein related to Werner's syndrome.

Sequences sequences

 $\tt ABB10981\hbox{-}ABB12330$ represent 1350 novel human polypeptides, and $\tt ABB08225\hbox{-}ABA09574$ represent nucleic acids encoding them. The

Claim 1; Page 436; 1963pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC invention also relates to vectors and recombinant host cells comprising a CC antibodies against the polypeptides of producing the novel polypeptides, cc antibodies against the polypeptides of identifying compounds which CC bind to polypeptides of the invention. Although novel, many of the CC polypeptides of the invention have homology to known proteins, thereby CC giving an insight into their probable biological activities, and hence CC potential therapeutic applications. The polypeptides of the invention have homology to known proteins, thereby CC invential therapeutic applications. The polypeptides of the invention may CC differential therapeutic applications. The polypeptides of the invention may CC differential therapeutic probable biological activities, and hence CC themotractic or chemotinetic activity; itsue growth activity; CC immunomodulatory activity; activity or inhibit-related activities; chemotractic or chemotinetic activities; haemostatic, thrombotic or thrombolytic activities; receptor or ligand activities; or may be conditions, e.g., and nucleotides of CC the invention are useful for preventing, treating or ameliorating medical CC conditions, e.g., because cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of CC the invention are useful for preventing, treating or ameliorating medical CC cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell caldsorders), chronic inflammatory conditions (e.g., asthma or arthritis), CC proliferative retinopathy, atherosclerosis, coronary heart disease, creativities and be used to promote wound the manufactions and incers), while those with immunomodulatory activities may be used to promote cell growth factor activity may be used to cell can be used to multiple to give rise to neuroepithelial cells chart can be used to neuroepithelial cells constituted to give rise to neuroepithelial cells constituted to give rise to neuroepithelial cells can only also be used to cell demanded to the diagnosis of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

//Clone_r1be library Gm-r1070 is a sequence-driven, reracked
//Clones selected from cDNA libraries from
set of 9,216 clones selected from cDNA libraries from
various tissues and stages of development of soybean that
represent 2,639 sequences from immature cotyledons, 1,770
from young pods. The 5' ESTs of the source clones from
the different libraries was used to select singletons, or
a representative of each contig, which were reracked to
form library Gm-r1070. The cDNA clones of the reracked
Gm-r1070 library were then sequenced at the 3' end. The
contig analysis to select unique genes was performed by
the laboratory of Ernest Retzel, Center for Computational
Genomics and Bloinformatics, University of Minnesota,
http://www.cbc.umn.edu/ResearchProjects/Soybean/index.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                University of Illinois, http://www.life.uiuc.edu/biotech/keck.html. Note: The corresponding 5' EST from each clone in the Gm-r1070 library is listed in the 'OTHER EST' field. The detail
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   information on the source library for each clone can
be obtained by referring to the Genome Systems clone
the original cDNA library that is also listed under
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Reracking was performed by Genome Systems, St. Louis http://www.genomesystems.com, and 3' sequencing by the Keck Center for Comparative and Functional Genomics,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /clone="Gm-r1070-2997"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anote—"Vector: pBluescript II SK; Site_1: EcoRI; Site_2: KNDI; This cDNA library was constructed from mRNA isolated from cotyledons of 3 - and 7 -day-old Williams seedlings which were propagated on paper towels with distilled water. The cotyledons were flash-frozen in liquid nitrogen, then lyophilized for 72 hours. Unequal amounts of mRNA was used for cDNA synthesis. Stratagene's cDNA Synthexix Kit (catalog number 200401) was used to synthesize the cDNA. First- stranded synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of stratagene's cDNA hemimethylated. A modification of stratagene's cDNA hemimethylated (V-A, C, or G) was added to the 3' end of the primer at the 5' end of the poly(A) tract. After second- strand synthesis, the cDNA ends were filled in with cloned pfu DNA, ligated to EcoRI adapters and subsequently phosphorylated. The XhOI site within the first-strand synthesis primer was then restricted by digestion with XhOI; all XhOI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500 bp cutoff, using GibcoBRL Life Technologies' cDNA size Fractionation column. The column eluent was then ligated vector (pBluescript II SK(+) that has been digested with EcoRI and XhOI, and phosphorylated by Stratagene). 97% of the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n-30). This library was constructed by Dr. Paul Keim and Dr. Virginia 103 c 125 g 154 t 2 others
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /clone="GENOME SYSTEMS CLONE

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index _e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Arabidopsis thaliana Eukaryota; Viridilplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; Rosidae; eurosids II; Brassicales; Brassicaceae; Arabidopsis.

water. The cotyledons were flash-frozen in liquid nitrogen, then lyophilized for 72 hours. Unequal amounts of mRNA was used for cDNA synthesis. Stratagene's cDNA Synthesix Kit (catalog number 200401) was used to synthesize the cDNA. First- stranded synthesis was performed with 5-methyl dCTP, hence the liquide cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An anchor nucleotide (V=A, C, or G) was added to the 3' end of the primer [GACAGAGAGAGAGAGACTCTCGAG[7]18] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned Pfu DNA, ligated to EcoRI adapters and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the CDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500 bp cutoff, using GibcoBRL Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript(tm) II XR Predigested vector (pBluescript II SK(+) that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene). 97% of the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n-30). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."

                                                                                                                                                                                                                              /note="Noctor: pBluescript II SK+; Site_1: EcoRI; Site_2: /note="Noctor: pBluescript II SK+; Site_1: EcoRI; Site_2: /note="Noctor: pBluescript II SK+; Site_1: EcoRI; Site_2: /note="Noctor: pBluescript II SK+; Site_1: EcoRI; Short the condition of 2 week old seedling from the cultivar Williams The 2 week old seedlings were salt stressed in a solution of 500mM NaCl for 3 days prior to harvesting. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were
                                                                                                                   directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library
                                                                                 was constructed in the laboratory of Dr. Randy

Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DHIOB host cells (GibcoBrL). This library was constructed in the laboratory of Dr. Randy Sheemaker."
